

Millions of people died in the early 2000's because pharmaceutical monopolies had priced successful treatments for HIV/AIDS out of reach at up to

\$10,000 A YEAR

From February to March 2021, rich nations have been vaccinating

ONE PERSON EVERY SECOND

while the majority of the poorest nations were **yet to give a single dose.**

Nations that represent just

14%

of the **world's total population**

now own

53%

of the **most promising vaccines.**

Wealthier nations, including **Ireland**, have already bought enough doses to vaccinate their entire populations almost

ALMOST 3 x TIMES OVER

by the end of 2021.

The **European Union** is paying

\$2.15

for each dose of the AstraZeneca vaccine,

while **South Africa** is spending

\$5.25

for the **same drug.**

9 in 10

people in up to 70 lower-income countries will **not have access to vaccines** in 2021.

As of mid-March, **NO African country** had received

MORE THAN 1%

of the **vaccines needed** to vaccinate its population.

At best, the continent of Africa could vaccinate

1 IN 10 PEOPLE

by the end of 2021.

Pfizer is expected to earn

\$19 BILLION

in revenue from the vaccine in 2021 with a **profit margin** estimated at between **60 and 80%**.

“Nine out of 10 people living in the poorest countries are poised to miss out on a vaccine this year,” and that, **“the vaccine science, knowhow and technology, paid for in large part by more than \$100bn of taxpayers’ money, can no longer be treated as the private property of pharmaceutical corporations.”**

- UNAIDS Executive Director **Winnie Byanyima**
